Chapter 1: Project Overview

1.1 Project Description

The Online Medicine Shop is a web-based pharmacy management system developed using PHP and MVC architecture. The system allows users to browse medicines online while admins and vendors manage products and inventory.

My assigned responsibility was the Vendor Module. Initially, the vendor section included cart and order features, but later the requirements were updated. The final vendor module allows vendors to:

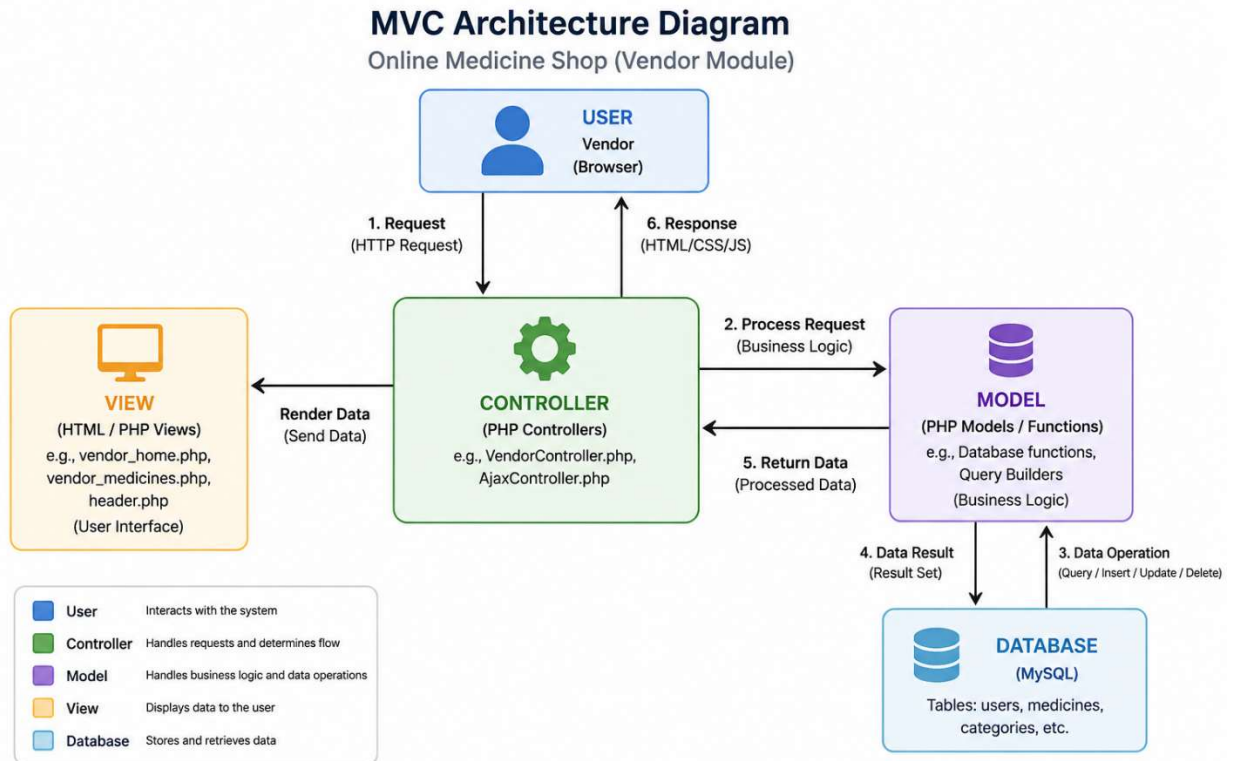

- view vendor dashboard
- add medicines
- edit medicines
- delete medicines
- manage medicine stock and pricing

The vendor can only manage medicines that belong to their own account.

1.2 Technologies Used.

Layer	Technology / Tool	Purpose
Frontend	HTML5, CSS3	User Interface
Frontend Logic	JavaScript, AJAX	Client-side validation, Dynamic Operations
Backend	PHP	Server-side logic
Database	MySQL	Data storage
Auth	PHP Sessions / Cookies	Vendor Login management
Version Control	Git / GitHub	Collaboration & versioning
Server	XAMPP / Apache	Local Server development

1.3 System Architecture / MVC Diagram

1.4 Database Schema

List your database tables and their key fields.

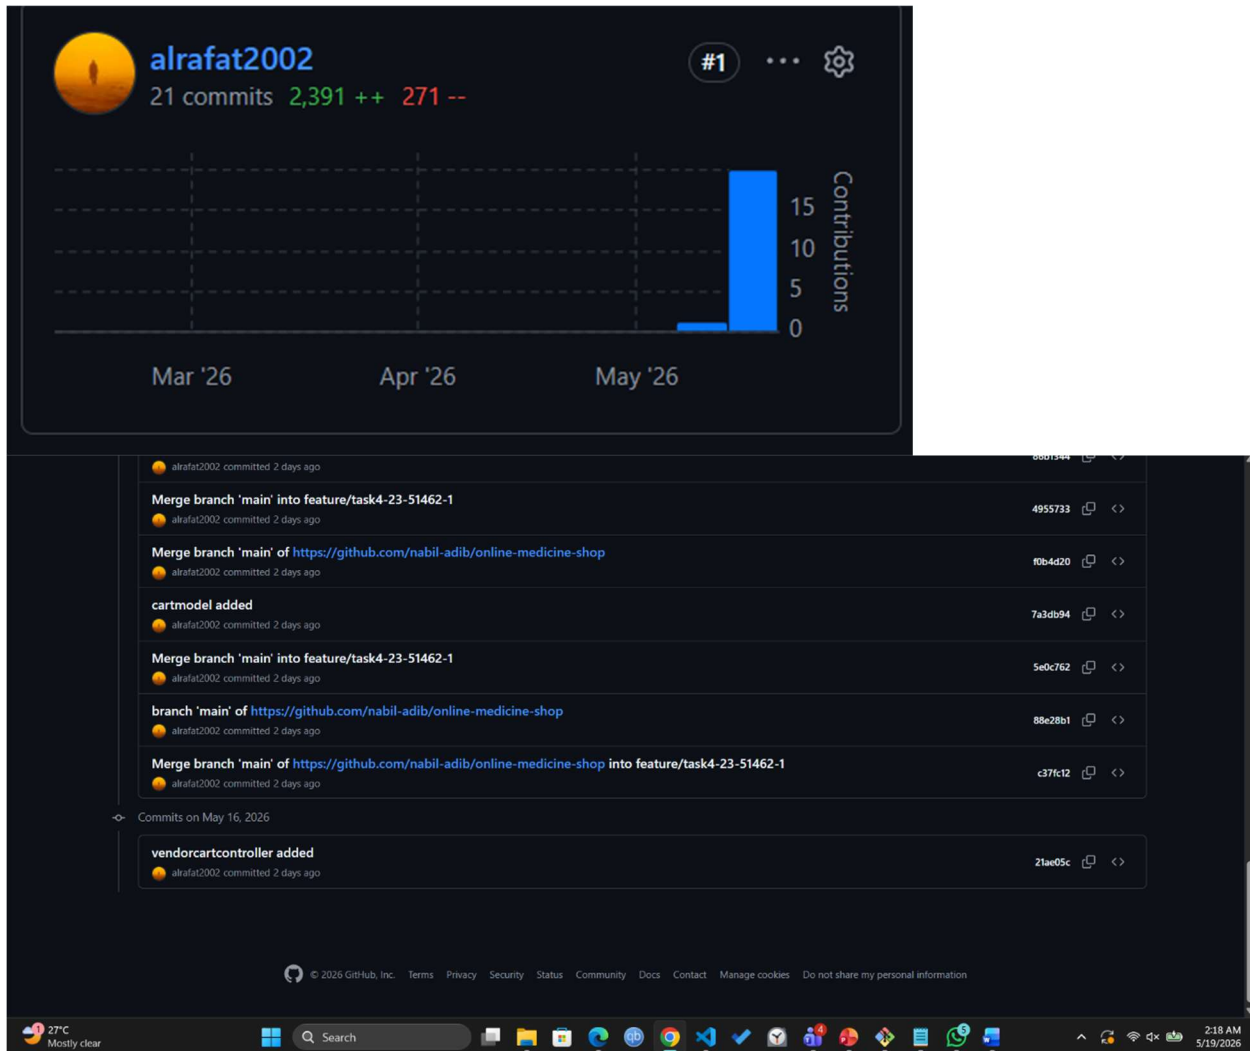

Table Name	Field Name	Data Type	Description
[e.g., users]	[e.g., user_id]	[e.g., INT]	[Primary Key]
	[e.g., username]	[e.g., VARCHAR(50)]	
[Table 2]

Chapter 3: Features, Source Code & Screenshots

For each feature implemented in the project, provide the following: a description, the relevant source code with explanation, and screenshot(s) of the UI.

Duplicate the feature section (Feature 1 block) as many times as needed — one block per feature.

Feature-1 : Vendor Dashboard

Description

The vendor dashboard displays:

1. total medicines
2. available categories
3. vendor medicine list

The dashboard provides a quick overview of vendor products.

Relevant Source Code.

File: views/vendor_home.php

```
// Paste your source code here
// Example (PHP):
<?php
if (!isset($_SESSION['user_id']) || $_SESSION['user_role'] !== 'vendor') {
    header('Location: index.php?page=login');
    exit;
}
require 'views/header.php';
?>

<div class="container">
    <!-- Welcome Banner -->
    <div style="background: linear-gradient(135deg, #2563eb 0%, #1e40af 100%);
border-radius: 1rem; color: white; padding: 2rem; margin-bottom: 2rem;">
        <h1 style="font-size: 1.875rem; font-weight: bold; margin-bottom:
0.5rem;">Welcome, <?= htmlspecialchars($_SESSION['user_name']) ?>!</h1>
        <p style="color: #bfdbfe;">Vendor Dashboard - Manage your pharmacy
products and orders</p>
    </div>

    <!-- Stats Cards -->
    <div style="display: grid; grid-template-columns: repeat(auto-fit,
minmax(250px, 1fr)); gap: 1.5rem; margin-bottom: 2rem;">
        <div style="background: white; border-radius: 0.75rem; padding: 1.5rem;
border: 1px solid #e5e7eb; text-align: center;">
            <h3 style="font-size: 1.875rem; font-weight: bold; margin: 0.5rem
0;"><?= count($medicines ?? []) ?></h3>
            <p style="color: #6b7280;">Your Medicines</p>
        </div>
    </div>
</div>
```

```

    </div>

        <p style="color: #6b7280;">Orders Received</p>
        <a href="index.php?page=vendor_orders" style="display: inline-block;
margin-top: 1rem; color: #2563eb; text-decoration: none;">View Orders -</a>
    </div>
</div>

<!-- Your Products Section -->
<div style="background: white; border-radius: 0.75rem; padding: 1.5rem;
border: 1px solid #e5e7eb;">
    <h3 style="font-size: 1.25rem; font-weight: bold; margin-bottom:
1rem;">Your Products</h3>
    <?php if (!empty($medicines)): ?>
        <div style="overflow-x: auto;">
            <table style="width: 100%; border-collapse: collapse;">
                <thead>
                    <tr>
                        <th style="padding: 0.75rem; text-align: left; border-
bottom: 1px solid #e5e7eb;">Name</th>
                        <th style="padding: 0.75rem; text-align: left; border-
bottom: 1px solid #e5e7eb;">Category</th>
                        <th style="padding: 0.75rem; text-align: left; border-
bottom: 1px solid #e5e7eb;">Price</th>
                        <th style="padding: 0.75rem; text-align: left; border-
bottom: 1px solid #e5e7eb;">Stock</th>
                    </tr>
                </thead>
                <tbody>
                    <?php foreach (array_slice($medicines, 0, 10) as $med): ?>
                        <tr style="border-bottom: 1px solid #e5e7eb;">
                            <td style="padding: 0.75rem;"><?=
htmlspecialchars($med['name']) ?></td>
                            <td style="padding: 0.75rem;"><?=
htmlspecialchars($med['category_name']) ?></td>
                            <td style="padding: 0.75rem;"><?=
number_format($med['price'], 2) ?></td>
                            <td style="padding: 0.75rem;"><?=
$med['availability'] ?></td>
                        </tr>
                    <?php endforeach; ?>
                </tbody>
            </table>

```

```

        </div>
        <?php else: ?>
            <p style="text-align: center; padding: 3rem; color: #9ca3af;">
                No products found. Medicines are managed by admin.
            </p>
        <?php endif; ?>
    </div>
</div>

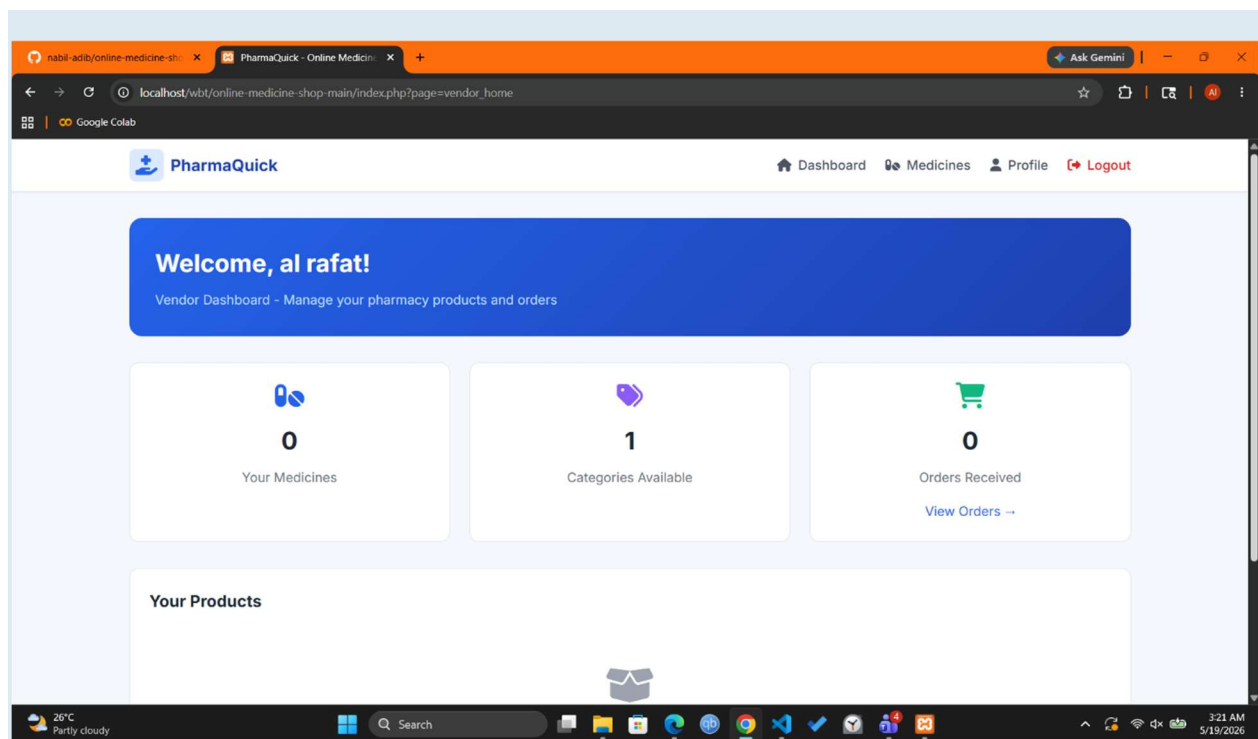

<?php require 'views/footer.php'; ?>

```

Code Explanation

1. count() counts vendor medicines
2. Medicine statistics are displayed dynamically
3. Vendor-specific data is shown using session authentication

Screenshot(s)

Feature-2 : Add Medicine

Description

This feature allows vendors to add new medicines into the system using AJAX-based form submission.

Fields:

1. medicine name

2. category
3. description
4. price
5. stock quantity

Relevant Source Code

File: AjaxController.php

```
// Paste your source code here
// Example (PHP):
function handle_vendor_add_medicine($conn) {

    $stmt = mysqli_prepare(
        $conn,

        "INSERT INTO medicines
        (
            name,
            category_id,
            description,
            price,
            availability,
            vendor_name
        )

        VALUES (?, ?, ?, ?, ?, ?)"
    );
}
```

Code Explanation

1. Validates vendor session
2. Collects medicine information
3. Uses prepared statements for security
4. Inserts medicine into database
5. Returns JSON response

The screenshot displays the 'PharmaQuick' web application interface. At the top, there's a navigation bar with links to 'Dashboard', 'Medicines', 'Profile', and 'Logout'. The main content area features a form titled 'Add New Medicine'. The form contains the following fields:

- Medicine Name ***: A text input field containing 'napi extra'.
- Category ***: A dropdown menu with 'antibiotic' selected.
- Description**: A large text area for entering the medicine's description.
- Price (₹) ***: A text input field containing '100'.
- Stock Quantity ***: A text input field containing '40'.

At the bottom of the form is a blue button labeled '✓ Add Medicine'. The browser's address bar shows the URL 'localhost/wbt/online-medicine-shop-main/index.php?page=vendor_medicines'.

Feature-3 : Edit Medicine

Description

This feature allows vendors to update existing medicine information through a popup modal form.

Vendors can edit:

1. medicine name
2. category
3. description
4. price
5. stock

Relevant Source Code

File: views/ vendor_medicines.php

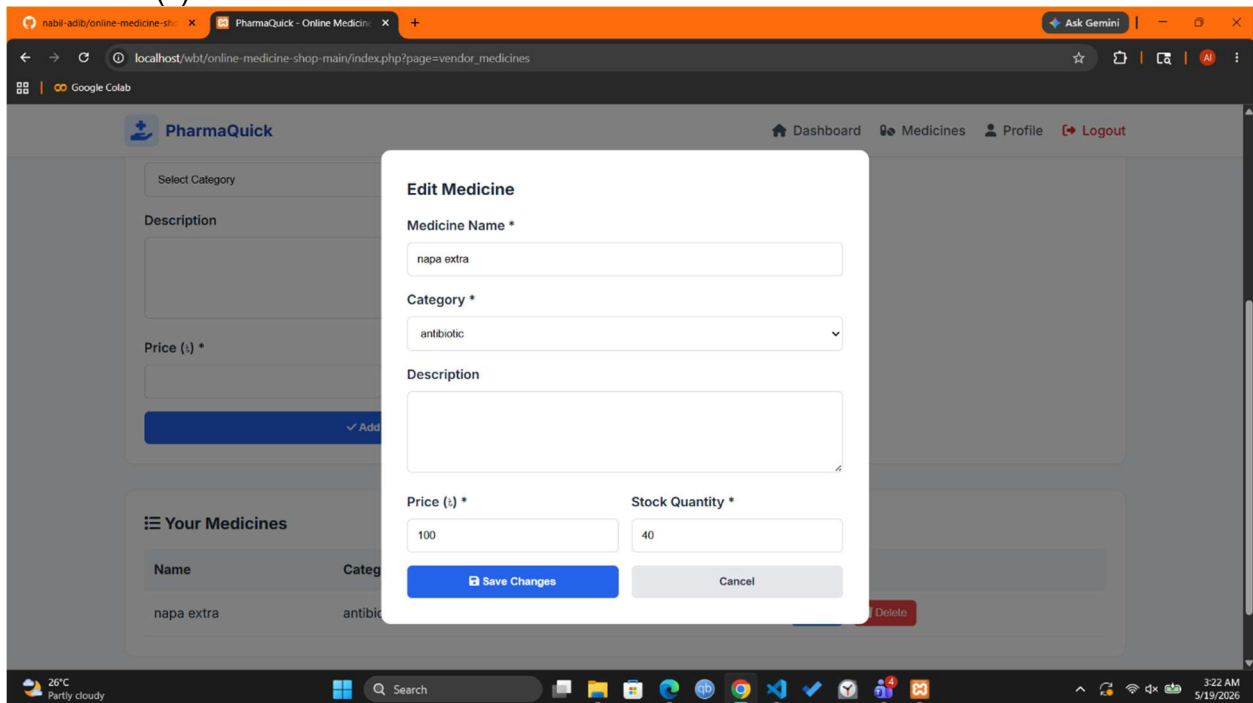

```
// Paste your source code here
// Example (PHP):
function editMedicine(
    id,
    name,
    categoryId,
    description,
```

```
price,
availability
)
```

Code Explanation

1. Opens edit modal popup
2. Fills existing medicine data automatically
3. Sends updated data using AJAX
4. Updates medicine without page reload

Screenshot(s)

Feature- 4: Delete Medicine

Description

This feature allows vendors to delete their own medicines from the database.

Ownership verification prevents unauthorized deletion.

.

Relevant Source Code

File: AjaxController.php

```
// Paste your source code here
// Example (PHP):
function handle_vendor_delete_medicine($conn) {
```

```

$stmt = mysqli_prepare(
    $conn,

    "DELETE FROM medicines
    WHERE id = ?
    AND vendor_name = ?"

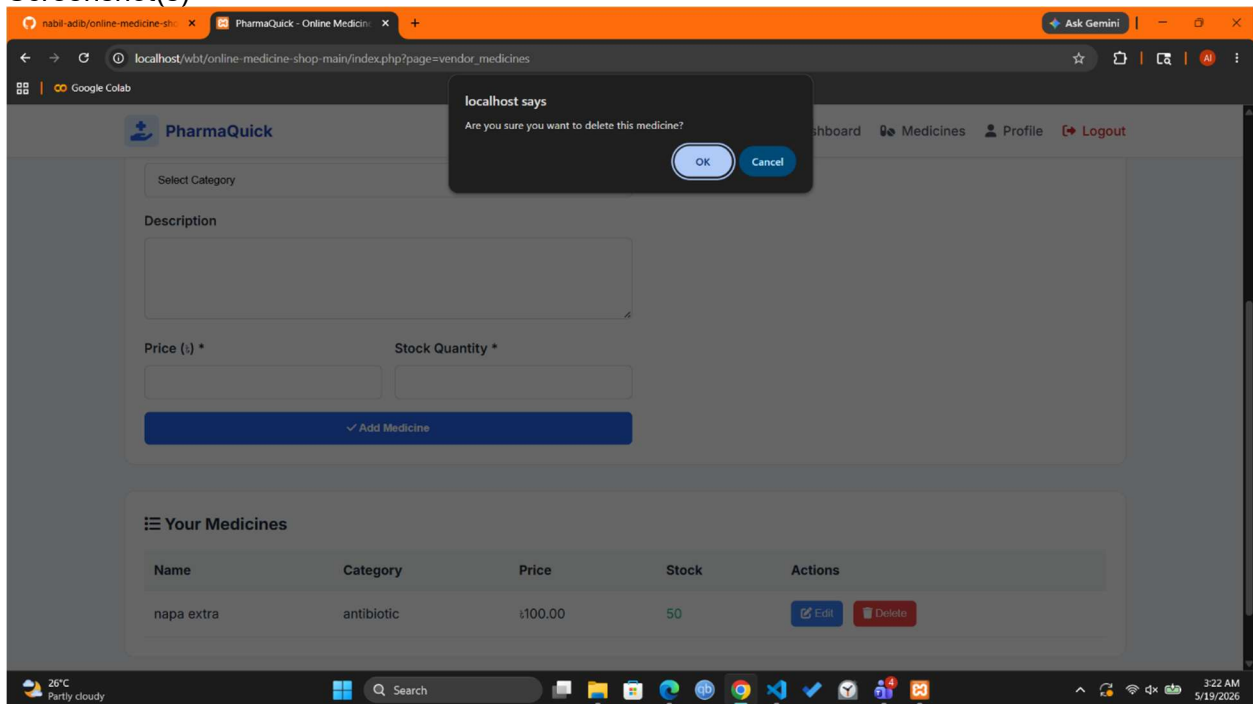

);
}

```

Code Explanation

1. Checks vendor ownership
2. Prevents unauthorized deletion
3. Uses prepared statements
4. Deletes selected medicine securely

Screenshot(s)

Feature- 5: Vendor Controller

Description

The vendor controller manages:

1. vendor dashboard
2. medicine page
3. vendor session authentication

Relevant Source Code

File: controllers/VendorController.php

```
// Paste your source code here
// Example (PHP):
<?php

function vendor_home_ctrl($conn) {
    if (!isset($_SESSION['user_id']) || $_SESSION['user_role'] !== 'vendor') {
        header('Location: index.php?page=login');
        exit;
    }

    // Get medicines for this vendor
    $vendor_name = $_SESSION['user_name'];
    $stmt = mysqli_prepare($conn, "SELECT m.*, c.name AS category_name FROM
medicines m JOIN categories c ON m.category_id = c.id WHERE m.vendor_name = ?
ORDER BY m.id DESC");
    mysqli_stmt_bind_param($stmt, "s", $vendor_name);
    mysqli_stmt_execute($stmt);
    $result = mysqli_stmt_get_result($stmt);
    $medicines = [];
    while ($row = mysqli_fetch_assoc($result)) {
        $medicines[] = $row;
    }

    // Get categories
    $categories = get_all_categories($conn);

    require 'views/vendor_home.php';
}

function vendor_medicines_ctrl($conn) {
    if (!isset($_SESSION['user_id']) || $_SESSION['user_role'] !== 'vendor') {
        header('Location: index.php?page=login');
        exit;
    }

    // Get medicines for this vendor
    $vendor_name = $_SESSION['user_name'];
    $stmt = mysqli_prepare($conn, "SELECT m.*, c.name AS category_name FROM
medicines m JOIN categories c ON m.category_id = c.id WHERE m.vendor_name = ?
ORDER BY m.id DESC");
    mysqli_stmt_bind_param($stmt, "s", $vendor_name);
    mysqli_stmt_execute($stmt);
    $result = mysqli_stmt_get_result($stmt);
    $medicines = [];
    while ($row = mysqli_fetch_assoc($result)) {
        $medicines[] = $row;
    }
}
```

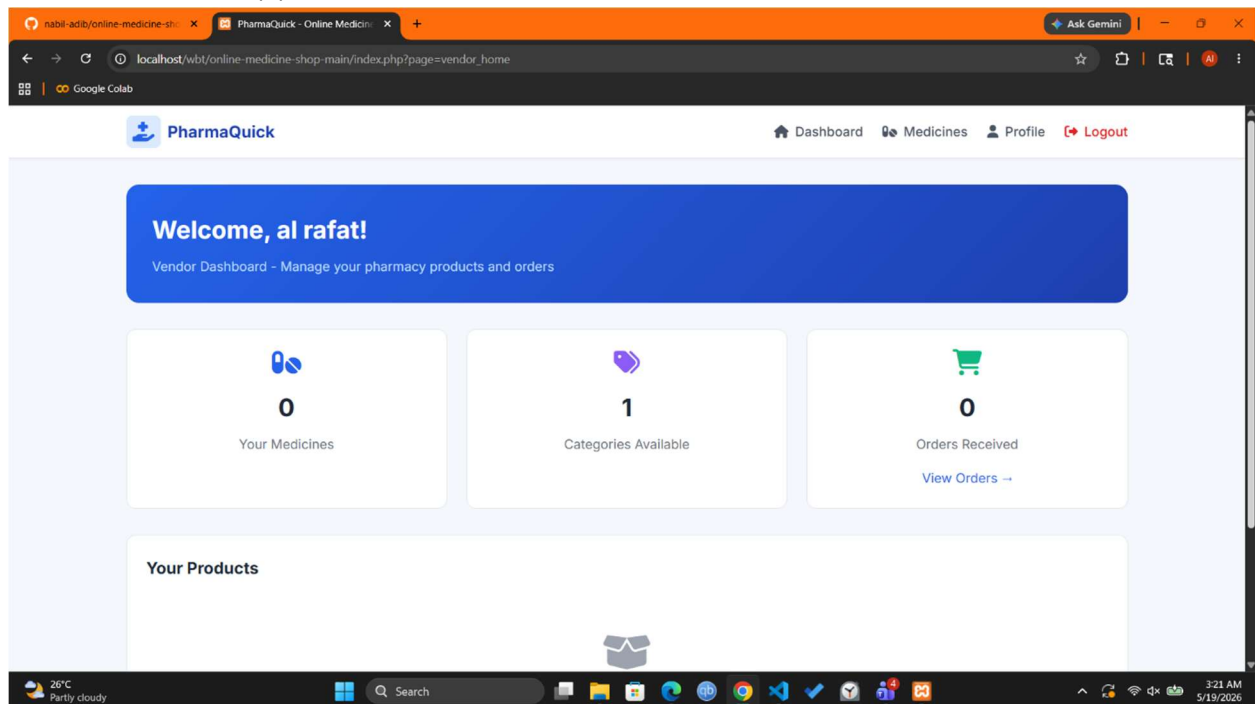

```
// Get categories
$categories = get_all_categories($conn);

require 'views/vendor_medicines.php';
}
?>
```

Code Explanation

1. Verifies vendor login
2. Retrieves vendor medicines
3. Loads categories
4. Displays vendor medicine view

Screenshot(s)

Chapter 5: Conclusion & Future Work

5.1 Summary

The Vendor Module of the Online Medicine Shop was successfully implemented using PHP MVC architecture. The module allows vendors to manage medicines through add, edit, and delete operations. AJAX functionality improved system responsiveness and user experience.

5.2 Challenges Faced

- Updating vendor module requirements
- Managing AJAX form submissions
- Implementing secure ownership verification
- Handling Git branch and Pull Request workflow

5.3 Future Improvements

1. Medicine image upload support
2. Advanced medicine search and filtering
3. Real-time stock alerts
4. Vendor sales analytics dashboard
